

Faculty Guide **ATTENTION DEFICIT HYPERACTIVITY DISORDER**

OVERVIEW AND DEFINITION

According to medical research, this disorder is considered neurobiological in origin. Abnormalities of neurochemicals in the brain, as well as a tendency to be transmitted genetically reflects current thinking about this condition. According to the DSM-IV (the diagnostic manual used by physicians), ADHD can occur in three forms: the inattentive type of attention deficit, the hyperactive-impulsive type of attention deficit and the combined type, attention deficit hyperactivity disorder. Between 30 to 70 percent of children diagnosed with these deficits continue to have residual symptoms that persist into adulthood that impacts to a significant degree in social, academic and occupational functioning. As well, with adults, other conditions often co-exist with attention deficits that include learning disabilities as well as mental health issues including anxiety and depression. This condition is **not** due to poor parenting or diet. It is treatable through a combination of medical intervention, compensatory strategies and accommodations that will manage the symptoms.

EDUCATIONAL IMPLICATIONS AND INSTRUCTIONAL STRATEGIES

Inattentive type of Attention Deficit Hyperactivity Disorder: The manifestations of this type of Attention Deficit Disorder include problems with “tuning out” or “drifting away” in the middle of reading a page in a book, or in conversations with others or in following a lecture in class. The ability to screen out distractions in class and focus on what is said or demonstrated can be a major problem. This cd

- student is not relying on oral instructions
- combine lectures with classroom demonstration, visuals, and videos
- provide reminders about homework, assignment and test dates
- students should be encouraged to sit near the front to maximize attention
- minimize room distractions
- work closely with the disability support office to ensure a successful learning experience for the student

ACADEMIC ACCOMMODATIONS

Students with disabilities are expected to accomplish the “core competencies” of their programs. To achieve this, accommodations are provided to minimize or eliminate any disadvantage their disability presents. Accommodations are unique to each individual. The disability support office in your college makes these recommendations based on confidential documentation that the student provides to the college. Some of the most commonly provided academic accommodations to students with ADHD include:

- reduced course load (encourage taking fewer courses per term to help manage workload)
- provision of a notetaker for lectures (due to problems with listening and note-taking done simultaneously)
- access to a computer to organize and edit assignments
- provision of extended time for tests and exams. The amount of extra time is determined by the disability s
